February 28th 2017

Waltz of the Wizard is a virtual reality experience created by Aldin Dynamics that lets players feel what it's like to have magical powers. Players combine arcane ingredients into a boiling cauldron with the help of an ancient spirit trapped in a human skull, unleashing creative and destructive wizardry upon a fully interactive virtual world. The experience also allows players to travel to new places, finding themselves in mysterious circumstances full of detail and unforgettable atmosphere.

Waltz of the Wizard was designed to serve as a good introduction to what makes room-scale VR unique, offering a diverse experience and game mechanics that utilize VR to its fullest. The experience offers a believable reality to interact with — taking full advantage of the fact that players can physically behave in VR as they do in the real world. *Waltz of the Wizard* is classified as compatible with standing play area setups, although it will be noted that it is designed for room-scale.

Userbase

Released for free on Steam on the 31st of May 2016, *Waltz of the Wizard* has seen over 300,000 sessions since release. The number of players has surpassed 100,000 as of the date of this publication.

Reception

Waltz of the Wizard was nominated in the 2016 Proto Awards for Best Interaction Design and, at the beginning of 2017, has become the highest rated VR app on Steam. The experience has received over 600 user reviews with a 99% positive approval rating.

ENTRANCE

⌚ 30 seconds

The initial loading scene before people enter the main wizard's tower scene.

WIZARD'S TOWER

⌚ 10 minutes

Main scene is where users spend most of their time, offering a sandbox environment with a broad range of interactive elements.

ELEVATED

⌚ 1 minute

Elevated places users on a narrow bridge over a deep chasm. The user has a number of small rocks he can throw down into the abyss.

HALLWAY

⌚ 1 minute

Hallway places users in a short cinematic scene designed to induce a fight or flight response. The user is offered a number of weapons to interact with while suspense is built through a combination of audiovisual events that hint at incoming danger.

THE TRIAL

⌚ 4 minutes

The Trial places users in another dimension where their physical movements are observed and commented on by ominous humanoid characters.

THE CELL

⌚ 2 minutes

The Cell is a medieval prison chamber with a short narrative that users can listen to through a door. The scene contains a secret ring that users can discover hidden in a hole in one of the walls.

The grand vision for immersive experiences are believable worlds that make users feel as if transported to another reality. These are the types of experiences that Aldin has been striving towards since 2013, and the company has seen first hand just how many challenges there are in achieving even the simplest implementations of that vision. Interactive virtual realities are more complex than conventional software; they need to work with a diverse range of hardware, and take real-world factors into account such as user stature, physical agility and play area sizes.

Designing for VR and physical immersion is largely uncharted territory, presenting an entirely new range of development challenges and design factors. As a developer you have the power to invoke deeply emotional sensations as well as to cause unintentional physical discomfort. The smallest of details can make or break an experience. For this reason it is absolutely vital to pay careful attention to the user experience and ensure that your content is having the exact impact that you envision.

Ghostline revolutionizes the VR production process, measuring and visualizing new factors in VR user engagement to help ensure that the broadest range of users are having the best experience possible. For any type of VR content being created, Ghostline targets development efforts and offers invaluable insights into the complex relationship between user behavior, content design and VR system setups.
